GORRE DINESH CHANDAN REDDY

7416767453 — gorredinesh21@gmail.com — GitHub — Portfolio

Education

Indian Institute of Technology (ISM), Dhanbad
Dec 2021 – May 2025
Bachelor of Technology in Computer Science and Engineering — *Dhanbad, India*

- **Relevant Coursework:** DSA, OOP, DBMS, Software Engineering, Computer Networks, Deep Learning

Experience

Reliance Industries Ltd.
Aug 2025 – Present
Graduate Engineer Trainee (Data / AI Engineer) — *Mumbai, India*

- **Talk-to-Genie Platform** — Built an external web application integrating Databricks Genie using OAuth-based authentication, enabling secure access outside Databricks with conversational interaction support.
- **Unified Genie Architecture** — Designed a scalable RAG framework overcoming Databricks Genie's **30-table limitation** by organizing **120+ tables** across **9 Genie spaces**.
- **Intelligent Query Routing Engine** — Built semantic retrieval pipelines using table and column metadata to dynamically route prompts to relevant Genie spaces.
- **Near Real-Time Data Pipeline** — Built ADF ingestion pipelines supporting **15-minute refresh cycles** with Landing → Bronze → Silver transformations.

Projects

CareerOS | Python, Flask, SQLite, LangChain, LangGraph | GitHub

- **AI Job Discovery Engine** — Built an end-to-end platform extracting job postings from LinkedIn, Indeed and Telegram and generating tailored resumes based on job requirements.
- **Multi-Agent LLM Workflow** — The platform extracts job postings, gives a probability of the candidate getting the job, and creates customised resumes for each job posting based on the job description.
- **Resume Automation Dashboard** — Developed an interactive dashboard with analytics, workflow execution and downloadable resume generation.

GAN-Based Data Augmentation for Imbalanced Datasets | Python, PyTorch, GANs, XGBoost, LightGBM | GitHub

- **Synthetic Data Generation Pipeline** — Built an end-to-end augmentation framework using Custom GAN and SMOTE to address class imbalance in tabular datasets. Used Credit cards dataset as a usecase (10000000+ Data points).
- **Custom GAN Architecture** — Designed Generator ($128 \to 256 \to 512$, Tanh) and Discriminator ($512 \to 256 \to 128 \to 1$) networks with Xavier initialization, LeakyReLU activations and BatchNorm for stable tabular GAN training.
- **Multi-Model Training Framework** — Implemented ML models (Random Forest, XGBoost, LightGBM and Gradient Boosting) on real data and real+augmented data using 5-fold cross-validation.
- **Performance Improvement** — Brought down False Negatives to just 9 in a dataset containing 10000000+ data points, Recall value increased from 0.91 to 0.99.

Tinder AI Coach | Python, FastAPI, LangChain, Google Gemini, Hugging Face, Ollama | GitHub

- **Web-Based Profile Automation** — Built a FastAPI dashboard where users manage and update their entire Tinder profile (bio, prompts and photos) from one place; the system standardizes and optimizes the inputs and writes them back to the live account, so users never open the Tinder app directly.
- **Multimodal Photo Analysis** — Integrated Google Gemini (gemini-2.5-flash) to analyze profile photos and return actionable feedback on composition, presentation, lighting, background and photo selection.
- **India Dating Knowledge Base** — Web-scraped and curated data on the Indian dating landscape (profile norms, preferences and photo best-practices) into a knowledge base that grounds the coach's profile and messaging advice in the local context.

Technical Skills

Data Engineering: Databricks, PySpark, ADF, ADLS Gen2, Apache Spark, ETL, Data Warehousing, AWS

ML and DL: Machine Learning, Deep Learning, GANs, Data Augmentation, NLP, Computer Vision, CNN, LSTMs, Transformers, OCR, TensorFlow, PyTorch, Keras, MLOps

Programming Languages / Databases: Python, SQL, PostgreSQL, C++, C

Gen AI: LangChain, LangGraph, Agentic AI, MCP, RAG, FAISS, ChromaDB, Hugging Face, Ollama, FastAPI

Achievements

- Secured AIR **2903** in JEE Advanced and AIR **4616** in JEE Mains
- Ranked among **Top 200 teams out of 18,500+ teams** in Amazon ML Challenge
- Participated in Hackfest'23 organized at IIT Dhanbad
